Issue Tracking System

User documentation

In this documentation you will learn how to use the Issue Tracking System application.

1. **Launching the application**
   Make sure you have Java and Maven properly installed on your computer.
   To launch the application, you can use the scripts that are in the Launcher folder which is in the root folder of the application.

2. **Creating an account**
   To use the application, you need to first create an account. This can be done by clicking the create account button. It will take you to a screen where you can create a new account. When you are done with filling the form, you can finish creating your account by clicking on the create account button.

3. **Issues overview**
   Whether you login to your existing account or you have just created a new one, you will be taken to the issues overview, where you can see all the currently open issues, as well as the already closed ones.

4. **Adding a new issue**
   To add a new issue, you have to click the create issue button. After filling the form, you can confirm the creation by clicking the create button.

5. **Editing an existing issue**
   You can now see your issue in the currently open issues table. You can edit it if you want by clicking the edit button in the corresponding row of the issue you want to modify.   You cannot edit other users' issues.

6. **Closing an issue**
   Similarly, you can close an issue that was created either by you, or by a user with the same or lower role than yours. The roles hierarchy is as follows (from the highest role to the lowest): project manager, team leader, programmer/tester, user.

7. **Logging out of the application**
   To log out you have to click to corresponding button in the top-left part of the overview screen.
